

CS335 - Assignment 1

Snehal Raj

170705

1 Tools Used

For generating the file `lex.yy.c` I have used Lex and the code snippets within Lex are written in C++

2 Compilation and Execution

I have included a script `run.sh` which

- Takes an input file
- Compiles the lex code in `words.l` into the c file `lex.yy.c`
- Generates the required executable named `lexer`
- Executes the `lexer` executable on the input file provided

To generate the required output file, simply run the command below

```
// The output is stored in <INPUT-FILE>.out  
$ ./run.sh <INPUT-FILE>
```
